1. The weekly playbook

What FastClinic is — the operations cockpit

FastClinic runs the back office of a **multi-specialty clinic** — general practice, surgical specialties (orthopaedics, ophthalmology, ENT, general surgery, gynaecology, urology and more) and dental care — in one workspace. The **Overview** is your daily scorecard: active and total patients, recent visits, revenue and trends, all dated so you always know how fresh the picture is.

Everything the clinic runs on is here: the **case mix and revenue** across every department, **appointments** booked into real availability, **billing** with a balanced ledger, and **patient recall**. It's built for the whole operations team — reception, practice managers, and finance — not just clinicians.

Sign in & the layout

Open **fastclinic.example** and sign in with your clinic login. The screen then has **three panes** that stay consistent everywhere:

- **Left** — navigation, grouped by job: *Overview · Operations · Recall & Scheduling · Communications · Admin*.
- **Centre** — the workspace: lists, tables, charts and forms.
- **Right** — the **AI Copilot**, always on hand to answer questions about your clinic. It can be collapsed to give the workspace more room.

Everything is server-rendered and fast; if you can read a list and press a button, you can run the clinic from here.

A sign-in form for FastClinic. The form is white with rounded corners and a shadow, centered on a light blue background. It contains the FastClinic logo, a subtitle, two input fields for email and password, and a blue sign-in button.

FastClinic
GP clinic activation cockpit. Sign in to continue.

Sign in

The AI Copilot — just ask

The **Copilot** on the right turns plain questions into answers from your live data. Ask “Which specialties bring in the most revenue?”, “How many surgical cases this month?” or “Which patients are due for recall?” and it replies with a ready-to-read table.

Power users can type **slash-commands** for instant results — `/kpi`, `/due`, `/lapsed`, `/followup`, `/revenue`, `/patient` `1206`. The suggested questions under the box are a good starting point.

Treatments & Specialties — the case-mix lens

This is the operations heart of the platform. Every treatment is classified on two axes — *what* it is (consultation, **surgery**, **dental**, diagnostic, procedure...) and *which specialty* delivered it — so you can see the whole clinic at a glance: **revenue and case volume across every department**, surgical throughput, and the **top procedures** driving income.

Use it to understand where the work and the money are — which specialties are growing, how much surgical and dental activity you're doing, and which procedures matter most. It's the view a practice manager opens first.

Appointments & booking

Book patients into **real availability**. Pick a clinician and day and the schedule shows every slot, free or taken. Booking checks for conflicts, so a clinician can **never be double-booked**; the same time on another clinician is still free. Confirm or cancel with one click, and every booking automatically queues a reminder the day before.

Shortcuts for power users

Clinical

The clinical picture across the practice: the most common diagnoses and a breakdown of activity by clinician. Useful for spotting trends, planning services, and understanding where the clinical workload sits.

Revenue

Where the money comes from: revenue by service category and the monthly trend. See at a glance which kinds of work drive income and how the clinic is tracking over time — the financial companion to the Treatments & Specialties view.

Billing & payments

Raise **fee invoices** against consultations — from a routine GP visit to a high-value surgical case — record **part or full payments**, and watch the numbers stay honest: a live **balanced ledger** underneath means every pound billed and collected is accounted for. Because the payer is tracked separately from the patient, a parent's invoice for a child — or an insurer's — is handled naturally.

Recalls Due

Recall keeps patients on track. This engine surfaces **exactly who is due or overdue** for a recurring service — childhood and adult immunisations, annual health checks, and repeat-prescription reviews — ranked most-overdue first.

Recall intervals are **age- and cohort-aware**: a flu booster for an over-65, a childhood immunisation, and a medication review each follow their own schedule. Each row comes with a drafted message, ready to send or export.

The Recall Loop — queue, send, measure

This closes the loop. **Queue due reminders** turns the recall lists into tracked reminders. Every message you then send is **logged** — sent, failed, or **blocked because the patient opted out** — so nobody is contacted twice and consent is always respected. The scorecard tracks pending reminders, messages sent, blocked contacts, and the **return rate**: how many contacted patients came back within 30 days.

The screenshot shows the 'Activation Loop' dashboard in the FastClinic interface. The top navigation bar includes 'Fast Clinic', a version/date string '0.1.0 2026-06-11', a 'Chat' button, a user profile 'FASTCLINIC admin@fastclinic.example', and a 'Logout' button. The left sidebar contains a menu with sections: OVERVIEW (Overview, AI Assistant), OPERATIONS (Patients, Appointments, Treatments & Specialties, Clinical, Billing, Revenue), RECALL & SCHEDULING (Recalls Due, Lapsed Patients, Post-Visit Follow-up, Recall Loop), COMMUNICATIONS (SMS, Email, Web Presence), HELP (Shortcuts, User Guide), and ADMIN (Data & Import). The main content area is titled 'Activation Loop' with a subtitle 'Reminders queued → messages sent → return visits attributed'. It features a scorecard with four metrics: 'PENDING REMINDERS' (1,582), 'MESSAGES SENT' (0), 'BLOCKED (OPTED OUT)' (0), and 'RETURN RATE (30D)' (—). Below the scorecard is a button 'Queue due reminders'. A table titled 'Pending reminders (50)' lists 15 reminders with columns for Subject, Category, Source, Due, and Status. The right sidebar contains an 'AI Assistant' section with a 'New' button and a text input area for asking questions about patients, immunisations, due revenue, or question types. Below this is a 'TRY ASKING:' section with three example questions in a list box.

Subject	Category	Source	Due	Status

#1842	Health check	Immunisation & plan due	2020-07-08	Pending

SMS & Email

Send reminders through your SMS or email provider. Paste a drafted message from any recall list, or write your own. Opted-out patients are **automatically suppressed** at the point of sending, so a message never reaches someone who has asked not to be contacted.

SMS Broadcaster

Turn activation lists into SMS campaigns. Build a targeted list in the Activation tabs, then send it here.

Demo mode. Live sending switches on as soon as an SMS provider (Twilio or VoodooSMS) is connected — that's a later setup step. You can already build and export targeted campaign lists from the Activation tabs, where 953 patients have a phone number on file.

Ask about patients, immunisations, revenue — in plain language

Copy Chat Share

Welcome! I'm the FastClinic AI assistant. Just ask in plain language — e.g. "Which patients are overdue for their booster?" or "How is the clinic performing this month?"

Power users can type `/help` for slash-command shortcuts.

Ask a question or type `/due` `/lapsed` `/help` ... **Send**

TRY ASKING: Which specialties bring in the most revenue? How many surgical cases this month?

Which patients are due for recall? [Shortcuts](#)

How to Use

Getting Started

The AI Assistant can help you in two primary ways:

- **Ask free-form questions** — ask about patients, immunisations, diagnoses, revenue, or activation opportunities in plain language.
- **Shortcut commands** — type a slash command for instant cockpit data pulled straight from the clinic database.

Example Questions

- Which patients are overdue for their flu immunisation?
- Who hasn't visited in over 12 months?
- What was revenue last quarter by category?
- Show the visit history for patient 117753
- How many patients are on an annual care plan?

Shortcuts

Command	Effect
<code>/kpi</code>	Clinic KPIs
<code>/due</code>	Immunisations & plans due / overdue
<code>/lapsed [months]</code>	Lapsed clients to win back
<code>/followup</code>	Recent visits to follow up

Web Presence

Grow the *top* of the funnel too. The audit suite checks how well your clinic shows up in search and in AI answer engines, and writes dated reports you can act on — so new patients can find you as easily as existing ones come back.

Data & Import — keep the records fresh

FastClinic works from your practice-management export. This page shows what's loaded — patients, contacts, consultations and more — and how to refresh it when a new export arrives. When contact details are included, recall lists are ready to send.

Data & Import

Clinic records built from practice-management exports

Clinic data

Status: loaded · reference date 2026-06-10

Records	Count
Patients	1,000
Contacts	953
Consultations	9,779
Diagnoses	5,358
Clinical notes	3,918
Billed items	22,856

Refresh from export

Add a new practice-management export and refresh to update the clinic records.

Detected exports: synthetic_fastclinic.xlsx

Contacts for outbound campaigns

When an export includes contact names, phones and emails, campaign lists are ready for SMS/email. Without them, lists identify patients by reference only.

The weekly playbook

A simple weekly rhythm keeps the clinic running well:

1. **See.** Open the Overview, then **Treatments & Specialties** for the week's case mix and revenue by department.
2. **Schedule.** Work the Appointments board — fill slots, confirm bookings, keep surgical lists moving.
3. **Bill.** Raise invoices for the week's work and record payments; the ledger keeps itself balanced.
4. **Recall.** Queue due reminders on the Recall Loop, review the drafted messages, and send — opted-out patients are handled for you.
5. **Measure.** Check the Recall Loop's **return rate** and the Overview's active- patient and revenue trends.

The one question FastClinic answers every day: "How is the clinic running across every specialty — and what needs attention today?"
