Run it every week

1. The weekly playbook & measuring impact

What FastClinic is & how it grows your practice

FastClinic is an all-in-one workspace for a GP practice: a place to see the whole clinic at a glance *and* an activation engine that turns your own visit history into more booked appointments and revenue. The **Overview** is your weekly scorecard — active and total patients, recent visits, revenue and trends, all dated so you always know how fresh the picture is.

It runs a simple, repeatable **activation loop**:

1. **See** — the cockpit ranks who is due, lapsed, or recently seen.
2. **Reach** — a message is drafted for you; you review and send by SMS or email.
3. **Book** — patients return for the immunisation, health check, or review.
4. **Measure** — return visits are attributed back, so you see what worked.

Recurring care is predictable: every patient you re-activate becomes due again next year, so a steady weekly cadence compounds into a growing, healthier list.

Sign in & the layout

Open **fastclinic.example** and sign in with your practice login. The screen then has **three panes** that stay consistent everywhere:

- **Left** — navigation, grouped by job: *Overview · Activation · Clinic · Marketing · Help · Admin*.
- **Centre** — the workspace: lists, tables, charts and forms.
- **Right** — the **AI Copilot**, always on hand to answer questions about your data. It can be collapsed to give the workspace more room.

Everything is server-rendered and fast; if you can read a list and press a button, you can run the whole clinic from here.

Your data stays private. FastClinic reads your practice's own records and never contacts a patient without you pressing send.

The AI Copilot — just ask

The **Copilot** on the right turns plain questions into answers from your live data. Ask “Which patients are overdue for immunisations?”, “Who should we win back this month?” or “How is the clinic performing?” and it replies with a ready-to-read table.

Power users can type **slash-commands** for instant results — `/due`, `/lapsed`, `/followup`, `/revenue`, `/patient 1206` — no waiting, no clicks. The suggested questions under the box are a good starting point.

Immunisation & Plan Due

The first activation engine surfaces **exactly who is due or overdue** for a recurring service — childhood and adult immunisations, annual health checks, and repeat-prescription reviews — ranked most-overdue first.

Recall intervals are **age- and cohort-aware**: a flu booster for an over-65, a childhood immunisation, and a medication review each follow their own schedule rather than a one-size-fits-all rule. Each row comes with a drafted reminder message and can be exported or sent straight to the broadcaster.

Shortcuts for power users

Lapsed Reactivation

Good patients drift away quietly. **Lapsed Reactivation** lists everyone with no visit in the last *N* months, ranked by lifetime value so you win back the most valuable relationships first. Adjust the window (6 / 12 / 24 months) to widen or tighten the net. A warm “we miss you” message is drafted for each patient.

The Activation Loop — queue, send, measure

This is what closes the loop. **Queue due reminders** turns the lists above into tracked reminders. Every message you then send is **logged** — sent, failed, or **blocked because the patient opted out of marketing** — so nobody is contacted twice by accident and consent is always respected.

The scorecard at the top tracks pending reminders, messages sent, blocked (opted-out) contacts, and the **return rate**: how many contacted patients came back within 30 days. That last number is the whole point — proof the activation work is bringing patients through the door.

Appointments & booking

Book patients into **real availability**. Pick a clinician and day and the schedule shows every slot, free or taken. Booking checks for conflicts, so a clinician can **never be double-booked**; the same time on another clinician is still free. Confirm or cancel with one click, and every booking automatically queues a reminder the day before.

FastClinic · Modern primary care, made personal

v0.1.0 · 2026-07-20 · fastclinic.example

Clinical

The clinical picture across the practice: the most common diagnoses and a breakdown of activity by clinician. Useful for spotting trends, planning services, and understanding where the clinical workload sits.

Revenue

Where the money comes from: revenue by service category and the monthly trend. See at a glance which services drive income and how the practice is tracking over time — the financial companion to the activation work.

Billing & payments

Raise **fee invoices** against consultations, record **part or full payments**, and watch the numbers stay honest: a live **balanced ledger** underneath means every pound billed and collected is accounted for. Because the payer is tracked separately from the patient, a parent's invoice for a child's treatment — or an insurer's — is handled naturally.

Data & Import — keep the records fresh

FastClinic works from your practice-management export. This page shows what's loaded — patients, contacts, consultations and more — and how to refresh it when a new export arrives. When contact details are included, campaign lists are ready to send; without them, lists identify patients by reference for you to match.

Data & Import

Clinic records built from practice-management exports

Clinic data

Status: loaded · reference date 2026-06-10

Records	Count
Patients	1,000
Contacts	952
Consultations	9,738
Diagnoses	5,401
Clinical notes	3,864
Billed items	24,540

Refresh from export

Add a new practice-management export and refresh to update the clinic records.

Detected exports: synthetic_fastclinic.xlsx

Contacts for outbound campaigns

When an export includes contact names, phones and emails, campaign lists are ready for SMS/email. Without them, lists identify patients by reference only.

The weekly playbook & measuring impact

A simple weekly rhythm keeps the practice growing:

1. **Monday — See.** Open the Overview, then the three activation lists. Skim who is due, lapsed, and recently seen.
2. **Reach.** Queue due reminders on the Activation Loop, review the drafted messages, and send by SMS or email. Opted-out patients are handled for you.
3. **Book.** As patients reply, book them into Appointments — no double-booking, with a reminder queued automatically.
4. **Measure.** At week's end, check the Activation Loop's **return rate** and the Overview's active-patient and revenue trends.

What to watch: active patients, return rate, and revenue trend. Each patient re-activated this year becomes due again next year, so the base of returning patients — and the revenue that comes with it — compounds week over week.

***The one question FastClinic answers every day:** “Which patients should we contact today to grow the practice — and what do we say?”*
